# EXPERIMENT-8.1.1 MULTIPLICATION OF TWO SQUARE MATRICES

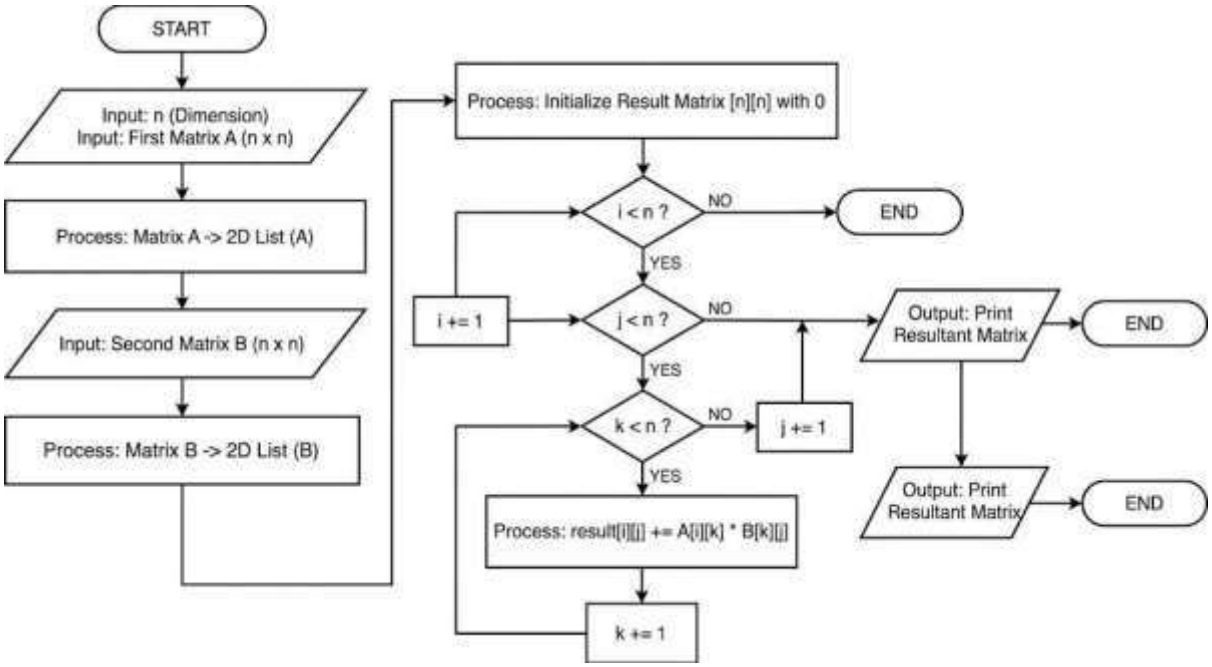
**ALGORITHM:**

1. Take size n.
2. Input two matrices
3. For each position:

- Multiply row of first matrix with column of second matrix
- Add the results

4. Store the value
5. Print the final matrix

**FLOWCHART:**



# CODE:

```
n = int(input("dimension:
"))  print("first matrix:")  A =
[]  for i in range(n):
        A.append(list(map(int,
input().split())))  print("second matrix:")
B = []  for i in range(n):
        B.append(list(map(int,
input().split())))          result = [[0]*n for _ in
range(n)]  for i in range(n):     for j in
range(n):                   for k in range(n):
                    result[i][j] += A[i][k] * B[k][j]
print("Resultant Matrix:")
for r in result:  print(*(r))
```
